

Tethered-drone solution provides secure visitor flow during the Ferté-Alais Air Show

Dardilly, 17 June 2019

For the second year in a row, teams from Delta Drone's ISS (Intelligent Security Systems) department played a part in the success of the Ferté-Alais Air Show that took place on 9 June 2019.

Thanks to the implementation of a tethered drone, always connected to the Magec (Civil Security's operating command post), management of visitor flow was optimal, allowing for smooth and efficient traffic for the over 35 000 aeronautics fans who attended the event.

Despite the gloomy weather and several heavy rain showers, the system was set up in accordance with the wishes of the on-site authorities, Larivière Organisation and the AJBS, the association that organized the show.

Didier Ferrara, former-GIGN (SWAT) who is now the head of Delta Drone's ISS department, was on site alongside the teams to coordinate the assignment and answer the many questions from people interested in the technology.

He said, "Over the last 12 months, assignments carried out during prestigious events such as the Ferté-Alais Air Show, the Bol d'Or race, the Ryder Cup and even the Paris Peace Forum have allowed us to gain experience in different environments and take a leading position among the service providers able to perform this type of work. Thanks to the recent integration of DPS – Drone Protect System within the Group, we will shortly have a range of highly complementary security solutions available. There is no doubt that our activities in the security sector will quickly see very strong growth from now on."

About Delta Drone: *The Delta Drone Group is a renowned international player in the field of civilian drones for professional use. It offers a complete service, from data acquisition to data processing through a specifically developed information system, including a supply of professional pilots.*
